

NATURE-BASED EDUCATION PROGRAMS FOR PRIMARY SCHOOLS

Hands-on and interactive

Curriculum-aligned with a STEM and Sustainability focus

ABOUT NATURA PACIFIC

Natura Pacific is a social enterprise, this means that we do charity by doing trade. Profits from Natura Pacific environmental consulting services are used by the Natura Pacific education team to subsidise the development and implementation of resources and programs for schools and communities.

We have over 15 years experience in teaching children and adults of all ages and abilities about the wonders of our natural world. Our diverse and passionate team includes qualified Teachers and practising Environmental Scientists with a high level of experience in their fields.

We use some of the field ecology survey techniques used by 'real-life Scientists' to teach students in a real, hands-on and interactive way! We have programs that we can adapt to suit your curriculum requirements. We have developed programs, resources, interpretive signage, brochures and more for a variety of clients.

As well as schools, our programs are also delivered to early learning centres, OSHC and vacation care providers, tertiary institutions and community groups. We can facilitate planting days with school and community groups too. Let us know if you have an idea to create a 'Nature Club' or something a little outside of the box.

WE COME TO YOU! OR ... WE CAN MEET YOU AT YOUR LOCAL PARK OR WATERWAY

Our nature-based education programs can be delivered as incursions on your school grounds or another suitable location of your choice such as your local park or waterways.

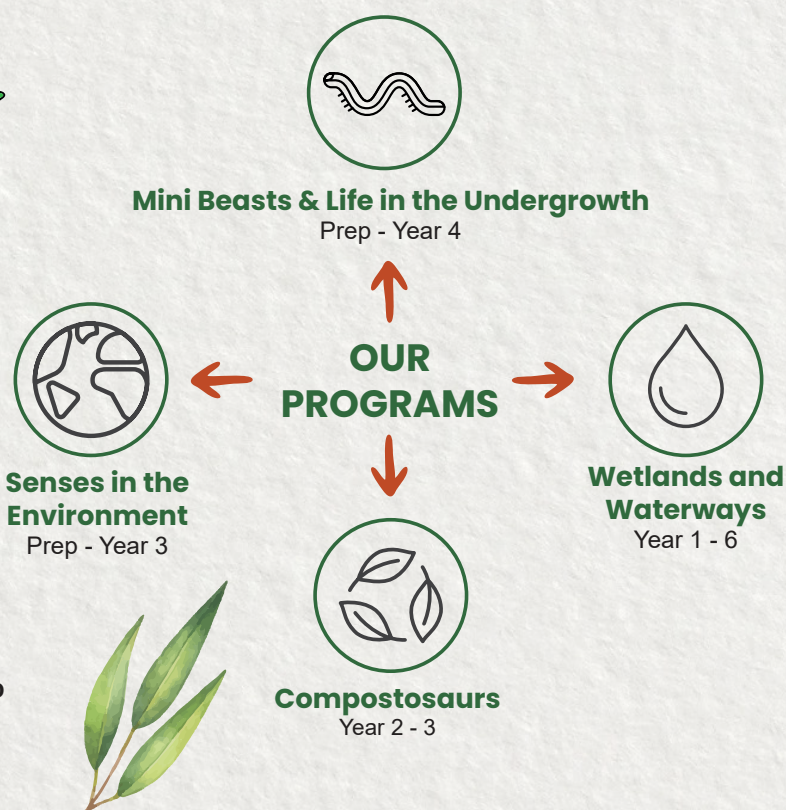

COSTS

\$9 per student per workshop

We do have a minimum charge to cover distance from our office, session length and resources.

We also have a **subscription package and price for schools who are interested in 20 or more workshop sessions** per year for multiple year levels and / or a sequence of workshops. Please contact us for a more comprehensive quote and to discuss your budget.

NATURE-BASED EDUCATION PROGRAMS FOR PRIMARY SCHOOLS

Hands-on and interactive

Curriculum-aligned with a STEM and Sustainability focus

ABOUT OUR PROGRAMS

Our programs align with the Australian National Curriculum (V8) for Science and Geography from Prep-10. Senior programs are also available upon request to suit your curriculum requirements.

We can adapt the following programs to suit your curriculum needs:

MINI BEASTS & LIFE IN THE UNDERGROWTH

(SUGGESTED - PREP-YEAR 4)

Dig deep down into Mini Beasts and Life in the Undergrowth! Explore a variety of topics including **features, basic needs, food chains** and more. Students will understand that changes to the environment may have positive and negative impacts on insect populations which can, in turn, have impacts on the environment.

WETLANDS & WATERWAYS

(SUGGESTED - YEAR 1-6)

Dive into the wonderful world of water bugs! Gain 'hands-on' opportunity to explore a variety of topics including **features, basic needs, food chains** and more. Students will use **field ecology survey techniques** to understand the importance of water bugs as environmental indicators and how we can improve the health of our waterways.

COMPOSTOSAURS

(SUGGESTED - YEAR 2-3)

Students will have the opportunity to 'get their hands dirty' while exploring the science and fun of **composting**. Students will investigate **compost critters** and understand the important role that they play in composting and soil health.

SENSES IN THE ENVIRONMENT

(SUGGESTED - PREP-YEAR 3)

Explore nature and have the 'hands-on' opportunity to use their senses to investigate **living things**, what they need to survive, their parts and how they respond to **seasonal and weather change**.
